COMPUTER SCIENCE & ENGINEERING

Experiment- 07

Student Name: Om

UID: 22BCS10196

Branch: BE-CSE

Section:22BCS_IOT_639-A

Semester: 6th

Date :25/03/25

Subject: PBLJ

Subject Code:22CSH-359

1.Aim: Create Java applications with JDBC for database connectivity, CRUD operations, and MVC architecture.

2.Objective: To create Java applications with JDBC for database connectivity, CRUD operations, and MVC architecture.

3.Code:

```
package      com;
import  java.sql.*;
public class App2 {
    public static void main(String[] args) {
        String url=
"jdbc:sqlserver://localhost:1433;databaseName=JAVA_DATA;encrypt=true;trustServerCert
ificate=true;integratedSecurity=true";
        // Establish connection
        String username = "hp\\22BCS12789";
        String password = "1234"; try {
        Connection conn=DriverManager.getConnection(url, username, password);
        System.out.println("Connected to database");
        //Create the statement
        Statement stmt=conn.createStatement();
        //create table
        String newtable="create table student("
        +"id int IDENTITY(1,1) PRIMARY KEY,"
        +"name varchar(50),"
        +"age int)";
        /stmt.executeUpdate(newtable);
        System.out.println("Table created successfully");
        //insert table
        String      insertquery="insert      into      student(name,age)      VALUES
('sukh',21),('Raman',23),('Riya',22),('Heena',18)";
```

```
stmt.executeUpdate(insertquery);
//update data
String updatequery="update student set age=20 where name='Sukh'";
stmt.executeUpdate(updatequery);
//delete data
String deletequery="delete from student where name='sukh'";
stmt.executeUpdate(deletequery);
//read data
String selectQuery="select * from student";
ResultSet rs=stmt.executeQuery(selectQuery);
while(rs.next()){
System.out.println("ID:"+rs.getInt("id")+"name:"+rs.getString("name")+"age:"+rs.get
Int("age"));
}
} catch(SQLException e){
System.out.println(e);
}
}
}
```

4. Output:

```
PS C:\Users\22BCS\Downloads\PBLJ\com.student1> & 'C:\Program Files\Java\jdk-22\bin\java.exe' -cp .\m.App2'
Connected to database
Table created successfully
PS C:\Users\22BCS\Downloads\PBLJ\com.student1>
```

```
SELECT * FROM STUDENT
CREATE DATABASE JAVA_DATA
USE JAVA_DATA;
```

	id	name	age
1	4	Raman	23
2	6	Raman	23
3	7	Riya	22
4	8	Heena	18

COMPUTER SCIENCE & ENGINEERING

5. Learning Outcomes:

- Learn how to establish a connection between a Java application and a relational database using JDBC.
- Gain proficiency in executing SQL queries, retrieving results, and handling database transactions effectively.
- Implement Create, Read, Update, and Delete (CRUD) functionalities using JDBC.
- Apply best practices for handling exceptions, managing connections, and optimizing database interactions.
